

Driver SMS Manager - Changelog

Version 1.4.0 (Latest)

Major New Features

MMS Support - Send and Receive Images

-  Click camera button to attach images to messages
- View images inline in conversation thread
- Click images to open full-size in new tab
- Support for JPEG, PNG, GIF up to 5MB
- Images display beautifully in message bubbles
- Received images show automatically

Emoji Picker

-  Click emoji button to open picker with 160+ emojis
- Organized emoji categories (smileys, hands, objects, etc.)
- Quick insert - click any emoji to add to message
- Closes automatically when clicking outside
- Popular emojis easily accessible

Team Selection Improvement

- "All Teams" now always appears at the top of dropdown
- Teams sorted alphabetically below "All Teams"
- Easier to quickly select all drivers

UI Enhancements

Message Input Area

- New emoji button () to left of input
- New camera button () for image attachments
- Image preview shows before sending

- Shows filename and file size
- Easy to remove attached image

Message Display

- Images display inline in conversation
- Click to view full-size
- Supports multiple images per message
- "📷 Image" text shown for image-only messages

💡 How to Use

Send an Image:

1. Open a conversation
2. Click 📷 camera button
3. Select image from device
4. Preview appears below input
5. Add optional text message
6. Click Send

Use Emojis:

1. Click 😊 emoji button
2. Scroll through emoji grid
3. Click any emoji to insert
4. Emoji added to message
5. Click outside picker to close

⚠️ MMS Notes

Important:

- MMS costs more than SMS (~\$0.02 per message with image)
- Images up to 5MB supported
- Supported formats: JPEG, PNG, GIF

- Recipient must have MMS-capable device
 - Some carriers may compress images
-

Version 1.3.3

Bug Fix - Notification Sounds

Fixed notification sounds not playing for incoming messages:

- Added audio context initialization on first user interaction (required by modern browsers)
- Added debugging logs to help troubleshoot sound issues
- Added "Test Notification" button in Settings to verify sound is working
- Improved error handling for audio playback
- Added helpful message: "Click anywhere on the page first to enable audio in your browser"

New Testing Feature:

-  Test Notification button simulates an incoming message
- Plays the selected sound and shows browser notification
- Helps verify everything is working correctly

How to use:

1. Click anywhere on the page after loading (enables audio in browser)
2. Go to Settings → Notification Sound
3. Click "  Test Notification" to verify sound works
4. If sound doesn't play, check browser console (F12) for errors

Note: Modern browsers (Chrome, Firefox, Safari) require user interaction before playing audio. This is a browser security feature, not a bug in the app.

Version 1.3.2

UI Enhancement

Full Theme Color Integration

- Theme colors now affect the ENTIRE app, not just background
 - All buttons, borders, and accents match your chosen theme
 - Sent message bubbles use theme color
 - Sort buttons use theme color when active
 - Unread message borders use theme color
 - File upload areas use theme color
 - Preview boxes use theme color
 - "Select All" links use theme color
 - Consistent color scheme throughout the entire interface
-

Version 1.3.1

Bug Fix

Improved Active Driver Filtering

- Enhanced Excel upload to better filter inactive drivers
 - Now handles case-insensitive "Yes" values (yes, YES, Yes)
 - Trims whitespace from Active column
 - Explicitly excludes "No", empty, or any non-"Yes" values
 - More robust handling of Excel data variations
-

Version 1.3.0

Major New Features

Smart Unread Sorting

- Unread messages now ALWAYS appear at the top of the driver list
- Regardless of sort mode (Recent/Name/Team), unread messages take priority
- Easy to see who needs your attention immediately

localStorage Caching (Hybrid Approach)

- Conversations now cached in browser's localStorage
- Instant loading when opening conversations (shows cached data first)
- Background refresh from Twilio keeps data current
- Much faster load times on repeat visits
- Cached data persists between sessions

Automatic STOP Blacklist

- Drivers who reply "STOP" are automatically blacklisted
- Blacklisted drivers cannot receive bulk messages
-  **Icon shows on blacklisted driver cards**
- **Prevents accidental** messaging to opted-out users
- **Complies with SMS** regulations

Blacklist Management

- New blacklist section in Settings
- View all blacklisted numbers with driver names
- Remove drivers from blacklist with one click
- Shows count of blacklisted drivers
- Bulk send automatically skips blacklisted numbers

Color Theme Picker

- Choose from 6 beautiful color themes:
 - Purple (Default gradient)
 - Blue Ocean
 - Green Mint
 - Orange Sunset
 - Pink Rose
 - Dark Mode
- Theme applies instantly across entire app
- Saved to localStorage (persists across sessions)

- Matches your personal style preference

Default to All Teams

- Driver list now defaults to showing "All Teams"
- No need to manually select "all" every time
- Faster access to full driver list

UI Improvements

Enhanced Driver Cards

- Blacklisted drivers shown with  icon and dimmed opacity
- Improved visual hierarchy
- Better spacing for icons

Settings Enhancements

- New color theme dropdown
- Blacklist management section with scrollable list
- Better organization of settings sections

Bulk Send Improvements

- Shows warning when blacklisted drivers are selected
- Confirms number of drivers that will be skipped
- Results page shows skipped (blacklisted) drivers separately
- Final alert includes blacklist skip count

Technical Improvements

Performance

- Faster conversation loading with localStorage cache
- Reduced API calls (cache-first strategy)
- Background sync keeps data fresh
- Conversations saved after every fetch/poll

Reliability

- Automatic STOP detection in all message flows
- Blacklist synced across all functions
- Better error handling for cache operations

Data Persistence

- Conversations cached in localStorage
 - Blacklist persisted in localStorage
 - Theme preference saved
 - Survives page refreshes and browser restarts
-

Version 1.2.0

Major Improvements

Full Conversation History

- Complete message history now loads when you open any conversation
- Fetches ALL messages for that driver from Twilio (not just last 50)
- Works across all devices - access full history from anywhere
- Messages persist on Twilio's servers permanently
- Smart pagination: loads up to 100 messages per driver efficiently

Enhanced Loading Experience

- Loading indicator shows while fetching conversation history
- Smooth animated "Loading conversation history..." message
- Fast subsequent loads (messages cached in memory during session)

Improved Message Polling

- Increased polling from 50 to 100 recent messages
- Smarter detection of new messages
- Better performance with many active conversations
- No longer limited to 50 total messages across all drivers

Multi-Device Benefits

Access from Anywhere

- Open the app on any device
 - See complete conversation history with each driver
 - No data loss between devices
 - All messages retrieved from Twilio's permanent storage
-

Version 1.1.0

New Features

Recent Messages View

- Added "Recent" sort option to driver list (now default view)
- Shows last message preview for each driver
- Displays time since last message (e.g., "5m ago", "2h ago", "3d ago")
- Indicates whether you sent the last message ("You: ...")
- Drivers with recent activity automatically appear at top
- Easy to find who you were talking to last

Improvements

Enhanced Driver Cards

- Driver cards now show conversation context when sorted by "Recent"
- Last message preview (truncated to 40 characters)
- Relative timestamps for better context
- "No messages yet" indicator for drivers without conversations
- Visual distinction between sent and received messages

Sort Options

The left sidebar now has three sort modes:

1. **Recent** (Default) - Sort by most recent message activity

2. **Name** - Alphabetical by driver name

3. **Team** - Group by team name

Version 1.0.0

Initial Release

Core Features

- Upload driver list from Excel file
- Send individual SMS messages
- Send bulk messages to multiple drivers
- Message personalization with {firstName}, {name}, {team}
- Optional signature field for bulk messages
- Live message preview
- Two-way messaging (send and receive)
- Conversation threading
- Team filtering
- Driver sorting (Name/Team)

PWA Features

- Installable as Progressive Web App
 - Offline cache for app shell
 - Service worker for fast loading
 - Desktop and mobile installation
 - Notification sounds (12 options)
 - Desktop notifications for incoming messages
-

Upgrade Instructions

To update to v1.3.0:

1. Replace `twilio-sms-standalone.html` with the new version

2. Update `sw.js` cache version to `driver-sms-v1.3.0`
 3. Update `manifest.json` version to `"1.3.0"`
 4. Clear browser cache or hard refresh (Ctrl+Shift+R)
 5. Service worker will automatically update
-

Roadmap (Future Versions)

Planned for v1.4.0

- Message search functionality
- Export conversation history
- Message templates for quick replies
- Schedule messages for future sending

Planned for v1.5.0

- Read receipts / delivery status
- Message statistics dashboard
- Multi-media messaging (MMS)
- Driver response tracking

Under Consideration

- Group messaging
 - Integration with delivery management systems
 - Automated messages based on triggers
 - Message analytics and reporting
 - Custom notification rules per driver
-

Feedback

Have suggestions or found a bug? Document your feedback and feature requests for future versions!

Major Improvements

Full Conversation History

- **Complete message history** now loads when you open any conversation
- Fetches ALL messages for that driver from Twilio (not just last 50)
- Works across all devices - access full history from anywhere
- Messages persist on Twilio's servers permanently
- Smart pagination: loads up to 100 messages per driver efficiently

Enhanced Loading Experience

- Loading indicator shows while fetching conversation history
- Smooth animated "Loading conversation history..." message
- Fast subsequent loads (messages cached in memory during session)

Improved Message Polling

- Increased polling from 50 to 100 recent messages
- Smarter detection of new messages
- Better performance with many active conversations
- No longer limited to 50 total messages across all drivers

Multi-Device Benefits

Access from Anywhere

- Open the app on any device
- See complete conversation history with each driver
- No data loss between devices
- All messages retrieved from Twilio's permanent storage

Technical Improvements

- New `fetchConversationHistory()` function
- Asynchronous conversation loading
- Better error handling for API calls

- Pagination support for large conversation histories
 - Safety limits to prevent excessive API calls
-

Version 1.1.0

New Features

Recent Messages View

- Added "Recent" sort option to driver list (now default view)
- Shows last message preview for each driver
- Displays time since last message (e.g., "5m ago", "2h ago", "3d ago")
- Indicates whether you sent the last message ("You: ...")
- Drivers with recent activity automatically appear at top
- Easy to find who you were talking to last

Improvements

Enhanced Driver Cards

- Driver cards now show conversation context when sorted by "Recent"
- Last message preview (truncated to 40 characters)
- Relative timestamps for better context
- "No messages yet" indicator for drivers without conversations
- Visual distinction between sent and received messages

Sort Options

The left sidebar now has three sort modes:

1. **Recent** (Default) - Sort by most recent message activity
2. **Name** - Alphabetical by driver name
3. **Team** - Group by team name

UI Updates

- Added third sort button for "Recent" view

- Recent sort button highlighted in indigo by default
 - Message previews show in gray text below driver info
 - Timestamps in lighter gray for subtle context
-

Version 1.0.0

Initial Release

Core Features

- Upload driver list from Excel file
- Send individual SMS messages
- Send bulk messages to multiple drivers
- Message personalization with {firstName}, {name}, {team}
- Optional signature field for bulk messages
- Live message preview
- Two-way messaging (send and receive)

PWA Features

- Installable as Progressive Web App
- Offline cache for app shell
- Service worker for fast loading
- Desktop and mobile installation
- Notification sounds (12 options)
- Desktop notifications for incoming messages

Settings

- Twilio credentials management
- Phone number configuration

- Notification sound selection
- Update driver list
- Clear cached data

Design

- Modern gradient UI (purple theme)
 - Glass-morphism cards
 - Responsive layout
 - Emoji icons
 - Smooth animations
 - Mobile-friendly interface
-

Upgrade Instructions

To update to v1.2.0:

1. Replace `twilio-sms-standalone.html` with the new version
 2. Update `sw.js` cache version to `driver-sms-v1.2.0`
 3. Update `manifest.json` version to `"1.2.0"`
 4. Clear browser cache or hard refresh (Ctrl+Shift+R)
 5. Service worker will automatically update
-

Roadmap (Future Versions)

Planned for v1.3.0

- localStorage caching for faster subsequent loads
- Offline message queue
- Message search functionality
- Export conversation history

Planned for v1.4.0

- Message templates for common messages
- Schedule messages for future sending
- Read receipts / delivery status
- Message statistics dashboard

Under Consideration

- Multi-media messaging (MMS)
 - Group messaging
 - Integration with delivery management systems
 - Automated messages based on triggers
 - Driver response tracking
 - Message analytics
-
